

NGCS Q & A - December 14, 2021 Technology Tuesday

The questions submitted during the webinar follow with answers that our speakers have provided. Key resources available include:

https://www.igga.net/wp-content/uploads/2020/05/NGCS_Construction_Existing_Newly_Constructed_Roads_5-19-20.pdf

1. Who are some of the leading pavement grinding companies using NGCS? Washington

Since its been around for 14 years, most highway grinding companies are experienced with NGCS construction.

2. Is there a kind of "standard" optimal configuration (spacers, number of shallow grooves between deeper grooves,...) in the U.S.? Belgium

The NGCS spec can be found at the IGGA website. The configuration has remained the same since the beginning except for the recent change to narrower longitudinal grooving blades to reduce tracking. This recent change is reflected in the current IGGA spec.
